Simplify Energy Economics

Helping you to “SEE” Through

We help energy companies, investors, and policymakers make smarter, faster, and more resilient decisions across the global energy value chain.

About SEE

From market analysis and economic evaluation to project financing, trading strategies, and executive training, we deliver data-driven solutions that bridge industry experience with advanced analytics.

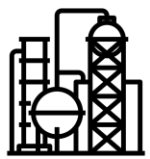
About Us

Our Story

With over 15 years of experience in the global energy sector, Simplify Energy Economics (SEE) provides end-to-end analytical, commercial, and strategic advisory and Training services across the entire energy value chain. We work at the intersection of technical engineering insight, economic rigor, and financial discipline, helping clients make robust, data-driven decisions in complex and volatile energy markets. Our expertise spans upstream, midstream, and downstream oil & gas, LNG and gas markets, power and renewable energy systems, and energy transition investments. We support clients across the full project lifecycle—from early-stage concept evaluation and feasibility studies, through commercial structuring and investment appraisal, to operational optimization and risk management. Our advisory approach is grounded in real-world industry experience, combining quantitative modeling, market intelligence, and practical execution knowledge. We translate complex technical and financial analyses into concise recommendations that senior management, investors, lenders, and policymakers can rely on. We serve a diverse client base including energy developers, trading firms, utilities, investors, lenders, EPC contractors, and public-sector stakeholders, across both conventional hydrocarbons and renewable energy and energy-transition projects. At Simplify Energy Economics, our mission is to simplify complexity, quantify risk, and enhance value, enabling our clients to navigate energy markets with confidence, clarity, and strategic foresight.

Our Clients *(Hover and Icons and more names to be confirmed)*

Upstream Companies



Midstream Operators

LNG & Natural Gas

Energy Finance

Solar & Wind companies

Energy Utility Firms

Consultancy Firms

National Oil Companies

Investment Firms

About Us

Our Team

Raj Srivastava is the Founder, director & principal economist for Simplify Energy Economics. He has over two decades of experience in market research, strategy development, financial modelling, and due diligence within the energy sector. He has held leadership and senior positions at Spirit Energy (Centrica Group), PETRONAS Carigali, and Dana Petroleum UK. Before these roles, Raj worked in M&A advisory with Deloitte and CGG Robertson UK. Raj has worked in the energy transition space, leading a number of workstreams. He presented a talk titled "Challenges of Valuation of Solar Investments" at the PETRONAS Economics Symposium 2021. He holds a postgraduate degree from Warwick Business School, UK with a focus on Energy, and an undergraduate degree from IIT (ISM) Dhanbad, India. Raj has further enhanced his expertise through certifications in Energy Economics, Renewable Finance, Offshore Wind Economics, and Climate Finance.

Dilip Jena is an energy economist specialising in the electricity and energy sectors of the UK, Europe and the USA. He is also a lecturer at Energy Economics at the University of Dundee's Centre for Energy, Petroleum and Mineral Law and Policy (CEPMLP), where his work centres on the economics of ancillary services in the power sector, electricity market design, the economics of net-zero and renewable energy, and the policy and economic challenges of energy and extractive industries in developing and under-developed countries. Dilip completed his doctorate and masters in energy economics from University of Dundee. Prior to that, he worked as a senior consultant with PwC India.

Vikas Kooneti: The project will be assisted by our Senior Analyst, Vikas Kooneti. Vikas has experience in economic and financial modelling, including solar, wind, Biomass and hydrogen as well as project finance. He joined us after finishing his second master's from Bayes Business School in energy trade & finance. Prior to that, he worked with eCERTO, a firm specializing in renewable finance. Additionally, he holds a postgraduate degree in energy economics & finance from the University of Aberdeen.

About Us

Our Approach

Our Approach is founded on the belief that robust energy decisions require both quantitative discipline and real-world understanding. We combine deep analytical rigor with hands-on industry experience to deliver insights that are not only technically sound, but also commercially realistic and implementable.

We take pride in bridging conventional energy expertise—including oil, gas, LNG, and power markets—with renewable energy and energy-transition innovations. Rather than treating these domains in isolation, we adopt an integrated value-chain perspective, recognizing the growing interdependence between legacy energy systems and emerging low-carbon solutions.

Our work begins with a thorough understanding of the client's context—market positioning, asset characteristics, regulatory environment, risk appetite, and strategic objectives. From there, we apply structured analytical frameworks, advanced economic and financial modeling, and scenario-based risk analysis to evaluate options under both base-case and stressed market conditions.

We emphasize:

- **Clarity over complexity**, translating sophisticated analysis into clear conclusions
- **Decision relevance**, focusing on insights that directly support investment, commercial, and strategic choices
- **Transparency and robustness**, ensuring assumptions, methodologies, and risks are clearly articulated

A defining feature of our approach is the integration of advisory and capability building. Where appropriate, we work alongside client teams, transferring knowledge through hands-on models, case studies, and targeted training, enabling organizations to replicate, adapt, and sustain our methodologies internally.

About Us

Testimonials

"Simplify Energy Economics provided clear, practical insights that helped us evaluate our project with confidence. Their analysis was thorough and easy to apply in real decision-making."

-Haitham Ghais, Head of OPEC

"The team combines strong technical knowledge with real industry experience. Their advisory and training support added immediate value to our internal team."

- Alex Kemp, Professor Aberdeen University

"We appreciated the structured approach and transparent models. SEE helped us better understand risk and improve our strategic planning."

- Amir Alizadeh, Director CGCSTF Bayes Business School London.

Services

Consultancy Services

We provide specialised energy economics, commercial advisory, and strategic consulting services that support clients across the full energy value chain. Our team brings deep industry experience in economic evaluation, risk modelling, market research, portfolio optimisation, and M&A advisory, enabling clients to assess opportunities with clarity and confidence. We combine rigorous analytical methods with practical, real-world insight to deliver commercially grounded recommendations. Whether guiding investment decisions, evaluating assets, or shaping long-term strategies, we offer tailored, data-driven solutions that help energy companies, investors, and financial institutions navigate market uncertainty and maximise value.

Investment Analysis & Valuation

- Asset and project valuation using DCF, comparables, and scenario-based methods
- Assessment of investment viability, value drivers, and downside risks
- Evaluation of capital structure, returns, and cost of capital assumptions
- Support for investment approvals and decision-making frameworks

Project Economics & Financial Modeling

- Development of transparent, auditable project-level financial models
- CAPEX, OPEX, production, and revenue forecasting across project life
- Integration of financing structures, taxes, and cash flow waterfalls
- Sensitivity and scenario testing to assess project robustness

Risk Analysis & Sensitivity Assessment

- Identification of key market, operational, financial, and regulatory risks
- Sensitivity analysis on prices, costs, volumes, and timing assumptions
- Scenario and stress testing under adverse market conditions
- Quantification of risk impacts on project and portfolio returns

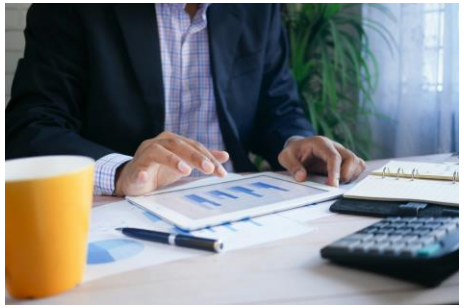
Services

Transaction Support & Due Diligence

- Commercial and financial due diligence for M&A and investments
- Independent review of assumptions, models, and market positioning
- Identification of value drivers, risks, and potential deal breakers
- Support for transaction negotiations and investment committees

Deal Structuring & Commercial Advisory

- Structuring of commercial terms to optimize risk–return outcomes
- Evaluation of contractual, fiscal, and revenue-sharing mechanisms
- Support for joint ventures, partnerships, and financing structures
- Alignment of deal economics with strategic and financial objectives



Portfolio Services & Optimization

- Portfolio-level performance analysis across assets and markets
- Risk-adjusted return assessment and capital allocation support
- Identification of diversification, optimization, and rebalancing opportunities
- Portfolio scenario analysis under changing market and policy conditions

Services

Asset Optimization & Performance Analysis

- Operational and financial performance benchmarking of energy assets
- Identification of cost reduction and efficiency improvement opportunities
- Optimization of production, dispatch, and revenue strategies
- Continuous performance monitoring and value enhancement support

Trading Advisory & Market Execution Support

- Advisory on physical and financial trading strategies across energy commodities
- Support for hedging structures, spread trading, and portfolio positioning
- Evaluation of trading risks including price, basis, and liquidity risk
- Alignment of trading strategies with commercial and risk objectives

Data Analytics & Decision Support

- Development of data-driven analytical models for energy markets and assets
- Integration of operational, market, and financial data for insights
- Scenario analysis and dashboards to support management decisions
- Automation and optimization of reporting and analytics workflows

Services

Market Research, Analysis & Forecasting

- In-depth market research across oil, gas, LNG, power, and renewables
- Demand–supply analysis and short- to long-term price forecasting
- Identification of market trends, structural shifts, and policy impacts
- Forecast-driven support for investment timing and strategic planning

Strategy Development & Growth Planning

- Corporate and business-unit strategy formulation
- Long-term growth planning and capital allocation frameworks
- Evaluation of organic and inorganic growth opportunities
- Strategic roadmap development aligned with market evolution

Market Entry & Expansion Strategy

- Market entry assessment including regulatory and commercial analysis
- Evaluation of entry modes, partnerships, and investment structures
- Risk assessment for new geographies and market segments
- Execution-focused recommendations for sustainable market expansion

Services

Training Services

Collaborating through our partners, We deliver practical, industry-focused training programs designed to build deep technical and commercial capability across the global energy sector. Our courses cover petroleum economics, energy trading, risk modelling, financial analysis, and market fundamentals. Each program integrates real-world case studies, practical modelling exercises, and interactive workshops to simplify complex concepts and ensure immediate workplace application. Whether delivered onsite, online, or in hybrid formats, our customized training solutions empower teams to improve decision making, strengthen analytical skills, and stay competitive in the evolving energy landscape.

Applied Energy Economics & Financial Modeling

- Practical, application-driven training focused on real decision-making
- Hands-on Excel and financial modeling across energy projects and assets
- Project economics, valuation, cash-flow modeling, and sensitivity analysis
- Best-practice model structuring with clear assumptions and logic

Real Industry Case Studies & Applications

- Use of real-world oil, gas, LNG, power, and renewable energy cases
- Translation of theory into commercial and investment decisions
- Discussion of market challenges, outcomes, and lessons learned
- Group-based case exercises to reinforce applied understanding

Energy Markets, Trading & Hedging Workshops

- Market fundamentals across oil, gas, LNG, power, and energy derivatives
- Trading strategy simulations, including spreads, arbitrage, and positioning
- Hedging workshops using futures, swaps, and options
- Practical understanding of price, basis, volume, and liquidity risk

Services

Portfolio Optimization & Investment Strategy

- Portfolio-level risk–return analysis across energy assets
- Optimization exercises covering diversification and capital allocation
- Scenario and stress testing under volatile market conditions
- Linking portfolio insights to investment and strategic decisions

Tailored Corporate & Executive Training

- Customized programs aligned to client roles and business objectives
- Domain-specific training for trading, investment, development, and utility teams
- Executive-focused sessions on strategy, risk, and capital allocation
- Modular delivery through workshops, bootcamps, or extended programs

Practical Learning & Capability Building

- Strong emphasis on hands-on learning and real market data
- Model-driven sessions enabling participants to build and modify tools
- Focus on immediately applicable skills and frameworks
- Knowledge transfer to support long-term internal capability

Our Expertise

➢ Oil & Gas Fiscal Modeling & Energy Economics (PSC & JV Frameworks)

- Upstream fiscal modeling: PSCs, royalties, cost recovery, R-Factor, ring-fencing
- Integrated production, cost, and revenue forecasting across field life
- Economic limit testing (ELT), abandonment, and decommissioning analysis
- Screening, ranking, and marginal field evaluation under multiple scenarios

➢ Renewable Energy & Power Markets

- Economic modeling for solar, wind, hybrid, and battery storage projects
- Power market fundamentals, pricing, and dispatch logic
- LCOE, LCOS, and revenue-stack evaluation
- Regulatory, policy, and market design assessment across regions

Our Expertise

➢ Financial Modelling & Investment Analysis

- Full DCF, APV, and scenario-based valuation
- WACC estimation, leverage analysis, and tax shield evaluation
- Portfolio-level value assessment and capital allocation analysis
- Investment screening and comparative opportunity assessment

➢ Project Finance & Debt Structuring

- Project finance modeling for LNG, power, renewables, and storage
- Debt sizing, DSCR/LLCR analysis, and financing optimization
- Capital structure design and funding strategy support
- Lender-focused sensitivity, downside, and covenant analysis

Our Expertise

➢ Market Research & Price Forecasting

- Oil, gas, LNG, and power market outlooks
- Benchmark pricing analysis (Brent, WTI, Dubai, JKM, HH)
- Freight and tanker market analysis (Worldscale, chartering, demurrage)
- Energy transition commodities (lithium, nickel, copper) assessment

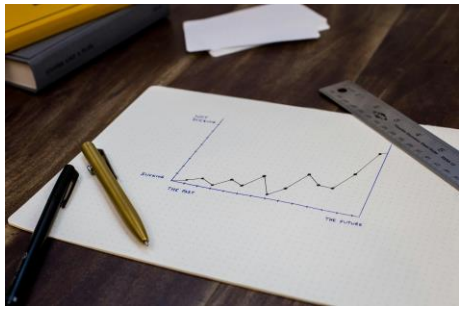
➢ M&A Strategy & Commercial Advisory

- Commercial and financial due diligence
- Asset screening, benchmarking, and competitive analysis
- Transaction, divestment, and partnership support
- Contracting strategy for long-term sales, tolling, and marketing

Our Expertise

➢ Data Analytics, Forecasting & Digital Optimization

- Time-series, econometric, and scenario-based forecasting
- Statistical and machine-learning applications in energy markets
- Python, Excel, R, and Power BI-based analytical solutions
- Automation of financial, economic, and reporting workflows



➢ Trading, Risk Management & Derivatives

- Energy derivatives: futures, options, swaps, swaptions
- Hedging frameworks for price, basis, and volume risk
- Spread trading: crack, spark, dark, and time spreads
- VaR, ETL, Monte Carlo simulation, and stress testing

Our Expertise

➢ Executive Training & Capability Building

- Petroleum economics and project evaluation training
- Oil, gas, LNG, and power market fundamentals
- Energy finance, valuation, and risk management
- Custom in-house programs for analysts, managers, and executives
